

CFE 415/427 Technical Manual

Safety

The instructions in this manual have been prepared to aid you in learning the proper procedures for your equipment. Where information is of particular importance or is safety related, the words NOTICE, CAUTION, or WARNING are used. The definitions of safety related words are described in the following table:

| | |
|---|--|
|  | SAFETY ALERT SYMBOL is used with DANGER, WARNING, or CAUTION which indicates a personal injury type hazard. |
|  | NOTICE is used to highlight especially important information. |
|  | CAUTION used without the safety alert symbol indicates a potentially hazardous situation which, if not avoided, may result in property damage. |
|  | CAUTION indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury. |

| | |
|---|--|
|  | <p>WARNING indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.</p> |
|  | <p>DANGER indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.</p> |

Chapter 1

System Overview

1.1 Controls and Indicators

The controls and indicators for the CFE 415.427 fryer are described in this section. The controls and indicators

Figure 1-0 CFE 415/427 Controls and Indicators

Table 1-0 Controls and Indicators

| Item | Name | Function |
|------|-------------|---|
| 1 | Heat On LED | Lights when the control calls for heat, the oil should start heating when this LED is lit. |
| 2 | Wait LED | Flashes when the oil temperature is not at the proper temperature for dropping product into the vat. |
| 3 | Ready LED | Lights when the oil temperature is 5°F below setpoint to 15°F above setpoint, signaling product can now be cooked. |
| 4 | Info button | <ul style="list-style-type: none"> - Press to display current fryer information and status. - When pressed in the program mode it shows previous settings. - When pressed along with the program button accesses the information mode which has historic operator and fryer performance information. |

| Item | Name | Function |
|------|----------------------------|--|
| 5 | Filter/Up and Down buttons | Used to access the Filter Menu; also used for ▲ or ▼ buttons. |
| 6 | Program button | <ul style="list-style-type: none"> - Press to access program mode. - When pressed in program mode it is used to advance to the next setting. - When pressed along with the info button it will access the information mode which has historic operator and fryer performance information. |
| 7 | | This button |
| 8 | Menu Card | Shows the name of the food product selected. |
| 9 | Product Select button | <ul style="list-style-type: none"> -Press to select food products to be cooked -Answers display prompts -Button 4 accesses diagnostics -Button 5 activates the clean-out mode -Button 6 toggles between English and Spanish |
| 10 | Digital Display | Shows all the functions of the cook cycle, program mode, diagnostic mode and alarms. |

Removal/Installation Procedures

This section contains removal/installation procedures for the CFE 415/427 fryer.

4.1 Removal Procedures

Removal procedure goes here XXX

4.1.1 Removal of the AIF Board

Removal procedure goes here XXX

4.1.2 Removal of the Control Board

Removal procedure goes here XXX

4.1.3 Removal of the Front Panels

This section contains the procedures to remove the front panels.

4.1.4 Removal of the Side Panels

This section contains the procedures to remove the side panels.

NOTE: Left side panel shown. Right side panel is identical.

| | |
|---|------------------|
| 1 | Screws (6 total) |
|---|------------------|

Figure 4-1 Side Panel Removal

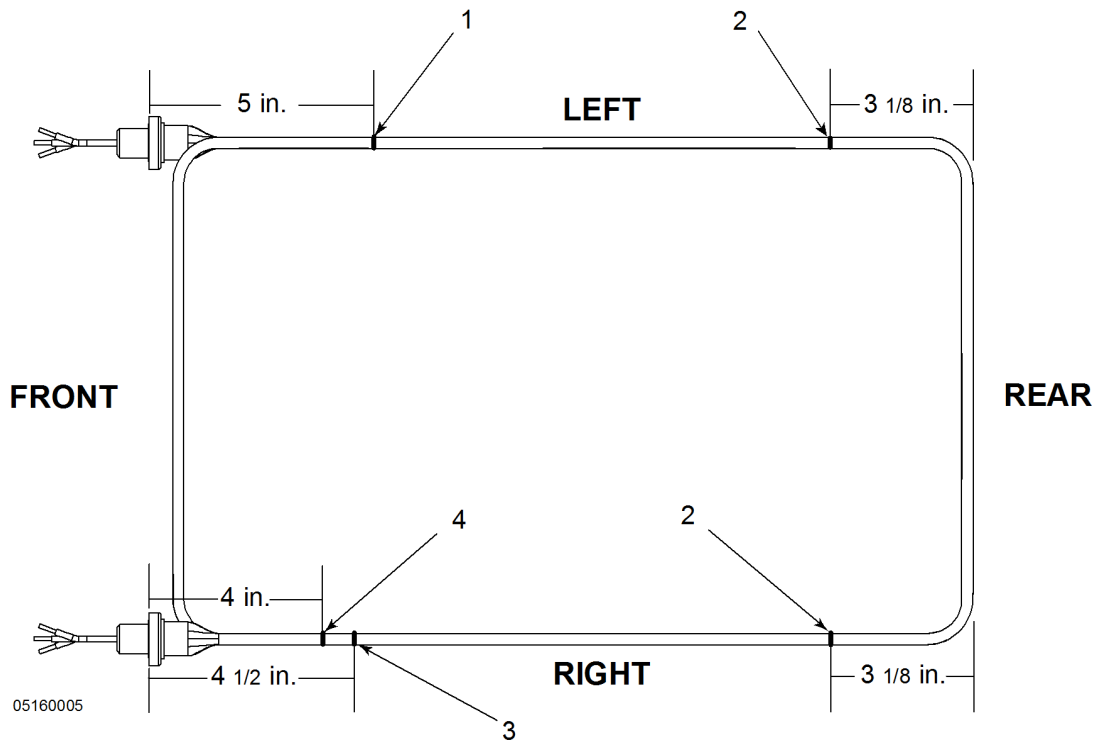

4.2 Installation Procedures

4.2.1 Installation of the Heating Element Assembly

This section contains the removal procedure for the Burner Assembly. The burner assembly contains two burners which are joined together by hardware. There is an upper burner and lower burner. The heating elements are identical and can be used interchangeably. Both heating elements must be removed in order to access the defective burner.

- 1) Place both heating elements on the work area.

- 2) Draw the following marks on the upper heating element (see [Figure 4-2 Marking the Upper heating Element](#)).
- Draw mark (1) on the left front side of the upper heating element five inches rear of the connector flange.
 - Draw a mark (2) on the left and right side of the upper heating element 3 1/8 inches forward of the rear of the heating element.
 - Draw a mark (3) on the right front side of the upper heating element 4 1/2 inches rear of the connector flange.
 - Draw a mark (4) on the right front side of the upper heating element 4 inches rear of the connector flange.

05160005

| | | | |
|---|---|---|----------------------------------|
| 1 | 5 inches from connector flange | 3 | 4.5 inches from connector flange |
| 2 | 3.125 inches from rear of heating element | 4 | 4 inches from connector flange |

Figure 4-2 Marking the Upper heating Element

- 3) Position one high limit clip (2) on the top front right side of both heating elements (see [Figure 4-3 High Limit Clip and Clamp Install](#)).
- 4) Position one high limit clamp (1) rear of the high limit clip (2) on the top front right side of both heating elements.

Figure 4-3 High Limit Clip and Clamp Install

- 5) Position two high limit clamps (1) on the top front left of the upper heating (see [Figure 4-4 Upper Heating Element Clamp Install](#)).

Figure 4-4 Upper Heating Element Clamp Install

- 6) Place upper heating element (4) on top of the lower heating element (5) (see [Figure 4-5 Spreader Bar Installation, Right Side](#)).
- 7) Position angled spreader (2) and straight spreader (3) over the high limit clips on the front right side of the heating elements.
- 8) Position angled spreader (2) and straight spreader (3) on the rear right side mark on the heating element.

Note

Do not tighten the allen screws all the way. The screws will be permanently tightened when the heating element assembly is placed in the vat.

- 9) Insert four allen screws (1) into the right side spreader bars (2) and (3) to keep them together.

05160008

| | | | |
|---|--------------------|---|-----------------------|
| 1 | Allen Screw, 10-32 | 4 | Upper Heating Element |
| 2 | Angled Spreader | 5 | Lower Heating Element |
| 3 | Straight Spreader | | |

Figure 4-5 Spreader Bar Installation, Right Side

- 10) Position one angled spreader (2) and one straight spreader (1) on each mark on the left side of the heating element assembly (see [Figure 4-6 Spreader Bar Installation, Left Side](#)).

Note

Do not tighten the allen screws all the way. The screws will be permanently tightened when the heating element assembly is placed in the vat.

- 11) Insert four allen screws (3) into the left side spreader bars (1) and (2) to keep them together.

05160009

| | |
|---|--------------------|
| 1 | Allen Screw, 10-32 |
| 2 | Angled Spreader |
| 3 | Straight Spreader |

Figure 4-6 Spreader Bar Installation, Left Side

- 12) Place four o-rings (3) over the wires onto the four connectors (see [Figure 4-7 Heating Element Assembly O-Ring Installation](#)).
- 13) Label the wires (1) on the upper heating element B and label the wires (2) on the lower heating element A.

| | |
|---|------------------------------|
| 1 | Upper Element Wires, Label B |
| 2 | Lower Element Wires, Label B |
| 3 | O-Ring |

Figure 4-7 Heating Element Assembly O-Ring Installation

- 14) Position heating element assembly (1) in the vat at an angle (front end first) (see [Figure 4-8 Positioning Heating Element Assembly Into Fryer](#)).
- 15) Route wiring (2) thru holes in the front of the vat.

| | |
|---|--------------------------|
| 1 | Heating Element Assembly |
| 2 | Heating Element Wiring |

Figure 4-8 Positioning Heating Element Assembly Into Fryer

- 16) Remove front panel to gain access to the hardware mounting area (refer to [4.1.3 Removal of the Front Panels](#)).
- 17) Remove left or right side panel as necessary to gain access to the hardware mounting area (refer to [4.1.4 Removal of the Side Panels](#)).
- 18) Remove AIF board (refer to [4.1.1 Removal of the AIF Board](#)).
- 19) Remove all power from the fryer.
- 20) Lock out and tag the equipment in accordance with company practices.
- 21) Place two washers (2) on the threaded end of each heating element connector (3) (see [Figure 4-9 Heating Element Assembly Hardware Install](#)).
- 22) Place a nut (1) on the threaded end of each heating element connector securing the heating element assembly to the fry pot.
- 23) Tighten all four nuts, Apply 32 ft/lbs of torque.

NOTE: Wires, components, and panels removed for clarity.

| | |
|---|-----------|
| 1 | Nut |
| 2 | Washer |
| 3 | Connector |

Figure 4-9 Heating Element Assembly Hardware Install

- 24) Insert thermocouple probe (4) thru spreader (5) opening and into the lower element front right high limit clamp (3) (see [Figure 4-10 Thermocouple Installation, Right Side](#)).
- 25) Adjust thermocouple probe (4) as necessary.
- 26) Insert thermocouple probe (1) thru spreader (5) opening and into the upper element front right high limit clamp (2).
- 27) Adjust thermocouple probe (1) as necessary.
- 28) Tighten both high limit clamps (2) and (3) on the front right side of the heating element assembly securing the thermocouple probes (1) and (4) to the heating element assembly, Apply 10 in/lbs of torque.

| | | | |
|---|---------------------------|---|---------------------------|
| 1 | Thermocouple Probe, Upper | 4 | Thermocouple Probe, Lower |
| 2 | High Limit Clamp, Upper | 5 | Spreader, Front Right |
| 3 | High Limit Clamp, Lower | | |

Figure 4-10 Thermocouple Installation, Right Side

- 29) Position front right spreader assembly (1) directly in the center of the upper and lower high limit clips (6) (see [Figure 4-11 Spreader Bars Installation, Right Side](#)).
- 30) Tighten both allen screws (2) on the front right spreader assembly (1) securing the spreader to the heating element assembly (3), Apply 32 in/lbs of torque.
- 31) Position rear right spreader bar assembly (4) 3.5 inches from rear vat wall.
- 32) Tighten allen screws (5) securing rear right spreader bar assembly (4) to the heating element assembly (3), Apply 32 in/lbs of torque.

| | | | |
|---|-----------------------------------|---|----------------------------------|
| 1 | Spreader Assembly, Front Right | 4 | Spreader Assembly, Rear Right |
| 2 | Allen Screw, Front Right Spreader | 5 | Allen Screw, Rear Right Spreader |
| 3 | Heating Element Assembly | 6 | Upper and Lower High Limit Clips |

Figure 4-11 Spreader Bars Installation, Right Side

- 33) Route heat probe (1) thru both front left high limit clamps (3).
- 34) Position the tip of the heat probe (1) 4 inches from the vat wall (2).
- 35) Tighten both front left high limit clamps (3), Apply 10 in/lbs of torque.

Figure 4-12 Heat Probe Installation, Left Side

- 36) Position front left spreader bar assembly (3) 4.250 inches from the front vat wall (4) (see [Figure 4-13 Spreader Bars Installation, Left Side](#)).
- 37) Tighten Allen screws (4) securing front left spreader bar assembly (3) to the heating element assembly (2), Apply 32 in/lbs of torque.
- 38) Position rear left spreader bar (1) 3.5 inches from rear vat wall (6).
- 39) Tighten Allen screws (5) securing rear left spreader bar assembly (1) to the heating element assembly (2), Apply 32 in/lbs of torque.

| | | | |

| 3 | Spreader Assembly, Front Left | 7 | Rear Vat Wall |
| 4 | Front Vat Wall | | |

Figure 4-13 Spreader Bars Installation, Left Side

- 40) Place rear guard element (1) and rear element guard clamp (2) on the rear of the heating element assembly (see [Figure 4-14 Element Guard Installation](#)).
- 41) Install three screws (3) securing the rear guard element (1) and the rear element guard clamp (2) to the heating element assembly.
- 42) Place front guard element (5) and front element guard clamp (6) on the front of the heating element assembly.
- 43) Install three screws (4) securing the front guard element (5) and the rear element guard clamp (6) to the heating element assembly, Apply 32 in/lbs of torque.

NOTE: Front panel removed for clarity.

Chapter 5

Troubleshooting

5.1 Warning Codes

While Error Codes generally result from some kind of hardware or equipment problem. Warning codes are frequently the result of operator error: overloading the fryer for example or starting a cook cycle before the fryer has recovered to setpoint. Warning codes may alert the user to suspected hardware problems like failed heating elements. The suspicion is based on observed temperature behavior rather than direct sensing of the heater operation. Warning Codes are activated based on user actions or based on the actual performance of the fryer. For a list of warning codes, the cause of the warning codes, and the corrective action; refer to [Table 5-2 Error Code Information](#).

Table 5-1 Warning Code Information

| Warning Code | Description | Correction Action |
|--------------|--|-------------------|
| W-1 | Incoming supply voltage too low | |
| W-2 | Slow heat up | |
| W-3 | Product loaded before ready light is on | |
| W-4 | Too much product in vat | |
| W-5 | Slow cooking | |
| W-6 | Slow cooking | |
| W-7 | Low Amps | |
| W-9 | Discard product | |
| OIL TOO HOT | Oil is hotter than the set-point temperature | |

5.2 Error Codes

This section of the manual describes the error codes for the CFE 415/427 fryer. Error codes are generated in the event of a control system failure. The error message are shown on the display. A constant tone is heard when an error code is displayed. The tone can be silenced by pressing any button. For a list of error codes, the cause of the error codes, and the corrective action; refer to [Table 5-2 Error Code Information](#).

Table 5-2 Error Code Information

| Error Code | Description | Correction Action |
|-------------------|--------------------------------------|---|
| E-1 | Low oil | Refer to 5.3.1 E-01 Low Oil Troubleshooting . |
| E-4 | CPU too hot | Refer to 5.3.2 E-04 CPU Too Hot Troubleshooting |
| E-5 | Fryer too hot | Refer to 5.3.3 E-05 Fryer Too Hot Troubleshooting . |
| E-6 | Fryer temperature sensor failed | Refer to 5.3.4 E-06 Fryer Temp Sensor Failed Troubleshooting . |
| E-10 | High Limit has tripped | Refer to 5.3.5 E-10 High Limit Tripped Troubleshooting . |
| E-15 | Drain is open | Refer to 5.3.6 E-15 Drain is Open Troubleshooting . |
| E-18 | Level sensor failed | Refer to 5.3.7 E-18 Level Sensor Failed Troubleshooting . |
| E-19 | Protection sensor failed | Refer to 5.3.8 E-19 Protection Sensor Failed Troubleshooting . |
| E-25 | Heat amps to high | Refer to 5.3.9 E-25 Heat Amps Too High Troubleshooting . |
| E-26 | Heat amps are locked on | Refer to 5.3.10 E-26 Heat Amps Locked On Troubleshooting . |
| E-27 | Heat amps to low | Refer to 5.3.11 E-27 Heat Amps Too Low Troubleshooting . |
| E-28 | Amp sensors not detected | Refer to 5.3.12 E-28 Amp Sensor Not Detected Troubleshooting . |
| E-29 | Shunt breaker tripped | Refer to 5.3.13 E-29 Shunt Breaker Tripped Troubleshooting . |
| E-41 | System data lost | Refer to 5.3.14 E-41 System Data Lost Troubleshooting . |
| E-46C | Internal memory error | Refer to 5.3.15 E-46C Internal Memory Error Troubleshooting . |
| E-46W | Data saved failed | Refer to 5.3.16 E-46W Data Saved Failed Troubleshooting . |
| E-47 | Analog system or 12 volt failed | Refer to 5.3.17 E-47 Analog System or 12 Volt Failed Troubleshooting . |
| E-48 | Analog or digital input system error | Refer to 5.3.18 E-48 Analog or Digital Input System Error Troubleshooting . |
| E-60 | AIF communication failed | Refer to 5.3.19 E-60 AIF Communication Failed Troubleshooting . |

| Error Code | Description | Correction Action |
|-------------------|-----------------------------|---|
| E-75 | Heat relay near end of life | Refer to 5.3.20 E-75 Heat Relay Troubleshooting . |
| E-92 | 24 volt fuse | Refer to 5.3.21 E-92 24 Volt Fuse Troubleshooting . |

5.3 Troubleshooting Procedures

5.3.1 E-01 Low Oil Troubleshooting

This section contains troubleshooting information for the E-01 Low Oil error code. Troubleshoot the E-01 Low Oil error in accordance with the following procedure:

5.3.2 E-04 CPU Too Hot Troubleshooting

This section contains troubleshooting information for the E-04 CPU Too Hot error code. Troubleshoot the E-04 CPU Too Hot error in accordance with the following procedure:

5.3.3 E-05 Fryer Too Hot Troubleshooting

This section contains troubleshooting information for the E-04 CPU Too Hot error code. Troubleshoot the E-04 CPU Too Hot error in accordance with the following procedure:

5.3.4 E-06 Fryer Temp Sensor Failed Troubleshooting

This section contains troubleshooting information for the E-06 Fryer Temp Sensor Failed error code. Troubleshoot the E-06 Fryer Temp Sensor Failed error in accordance with the following procedure:

5.3.5 E-10 High Limit Tripped Troubleshooting

This section contains troubleshooting information for the E-10 High Limit Tripped error code. Troubleshoot the E-10 High Limit Tripped error in accordance with the following procedure:

5.3.6 E-15 Drain is Open Troubleshooting

This section contains troubleshooting information for the E-15 Drain is Open error code. Troubleshoot the E-15 Drain is Open error in accordance with the following procedure:

5.3.7 E-18 Level Sensor Failed Troubleshooting

This section contains troubleshooting information for the E-18 Level Sensor Failed error code. Troubleshoot the E-18 Level Sensor Failed error in accordance with the following procedure:

5.3.8 E-19 Protection Sensor Failed Troubleshooting

This section contains troubleshooting information for the E-19 Protection Sensor Failed error code. Troubleshoot the E-19 Protection Sensor Failed error in accordance with the following procedure:

5.3.9 E-25 Heat Amps Too High Troubleshooting

This section contains troubleshooting information for the E-25 Heat Amps Too High error code. Troubleshoot the E-25 Heat Amps Too High error in accordance with the following procedure:

5.3.10 E-26 Heat Amps Locked On Troubleshooting

This section contains troubleshooting information for the E-26 Heat Amps Locked On error code. Troubleshoot the E-26 Heat Amps Locked On error in accordance with the following procedure:

5.3.11 E-27 Heat Amps Too Low Troubleshooting

This section contains troubleshooting information for the E-27 Heat Amps Too Low error code. Troubleshoot the E-27 Heat Amps Too Low error in accordance with the following procedure:

5.3.12 E-28 Amp Sensor Not Detected Troubleshooting

This section contains troubleshooting information for the E-28 Amp Sensor Not Detected error code. Troubleshoot the E-28 Amp Sensor Not Detected error in accordance with the following procedure:

5.3.13 E-29 Shunt Breaker Tripped Troubleshooting

This section contains troubleshooting information for the E-29 Shunt Breaker Tripped error code. Troubleshoot the E-29 Shunt Breaker Tripped error in accordance with the following procedure:

5.3.14 E-41 System Data Lost Troubleshooting

This section contains troubleshooting information for the E-41 System Data Lost error code. Troubleshoot the E-41 System Data Lost error in accordance with the following procedure:

5.3.15 E-46C Internal Memory Error Troubleshooting

This section contains troubleshooting information for the E-46C Internal Memory Error code. Troubleshoot the E-46C Internal Memory error in accordance with the following procedure:

5.3.16 E-46W Data Saved Failed Troubleshooting

This section contains troubleshooting information for the E-46W Data Saved Failed error code. Troubleshoot the E-46W Data Saved Failed error in accordance with the following procedure:

5.3.17 E-47 Analog System or 12 Volt Failed Troubleshooting

This section contains troubleshooting information for the E-47 Analog System or 12 Volt Failed error code. Troubleshoot the E-47 Analog System or 12 Volt Failed error in accordance with the following procedure:

5.3.18 E-48 Analog or Digital Input System Error Troubleshooting

This section contains troubleshooting information for the E-48 Analog or Digital Input System error code. Troubleshoot the E-48 Analog or Digital Input System error in accordance with the following procedure:

- 1) Replace the control board (refer to [4.1 Removal Procedures](#)).
- 2) Verify the error code is no longer present.

5.3.19 E-60 AIF Communication Failed Troubleshooting

This section contains troubleshooting information for the E-60 AIF Communication Failed error code. Troubleshoot the E-60 AIF Communication Failed error in accordance with the following procedure:

5.3.20 E-75 Heat Relay Troubleshooting

This section contains troubleshooting information for the E-75 Heat Relay error code. Troubleshoot the E-75 Heat Relay error in accordance with the following procedure:

5.3.21 E-92 24 Volt Fuse Troubleshooting

This section contains troubleshooting information for the 24 Volt Fuse error code. Troubleshoot the 24 Volt Fuse error in accordance with the following procedure:
