

REZNOR®

More Even Heating

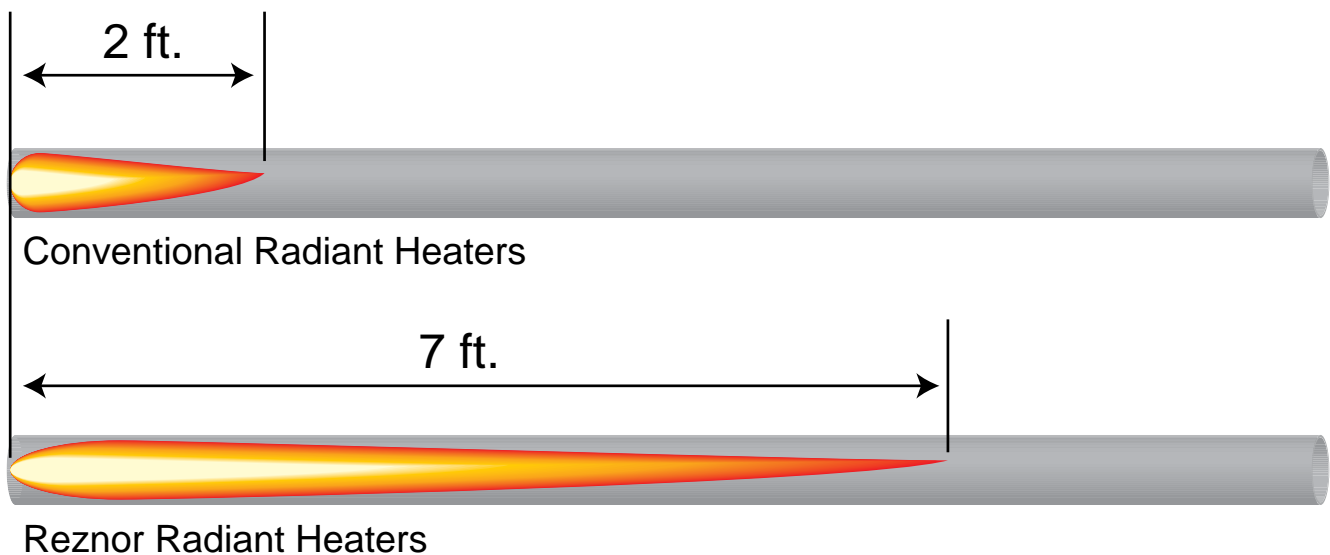

The Competitive Edge

What is the Reznor Edge?

The Reznor Edge: There are several advantages to using Reznor radiant heaters vs. conventional systems.

- Reznor radiant heaters offer more even heating along the length of the system due to a longer, more effective flame (See illustrations below).
- Noise level on Reznor radiant heaters are also lower when compared to conventional heating systems.
- Peak flame temperature is less than conventional units.
- Reznor radiant heaters offer two stages of heating (Hi/Lo) so the right amount of heat can be delivered when it is needed.
- Operation indicator lights
 - » Red light - power on
 - » One amber light - burner on
 - » Two amber lights - burner on high (two-stage heating units)
- Sturdy construction means minimal maintenance is required
- When heating is required for a damp or humid environment; or when heating needs to be applied outdoors (such as a restaurant patio), Reznor Series VC can stand up to the challenge. The burner box and heating tubes are constructed of stainless steel.

The longer flame in Reznor radiant heaters means more even heating along the length of the tube system.
