WARNINGS AND CAUTIONS - ENGLISH

CAUTION

These servicing instructions are for use by qualified service personnel only.

To reduce the risk of electric shock, do not perform any servicing other than that contained in the operating instructions unless you are qualified to do so.

WARNING!!

An isolation transformer should be used during any service to avoid possible shock hazard, because of live chassis.

The chassis of this receiver is directly connected to the ac power line.

CARRYING THE TV

Be sure to follow these guidelines to protect your property and avoid causing serious injury.

- Carry the TV with an adequate number of people; larger size TVs require two or more people.
- Correct hand placement while carrying the TV is very important for safety and to avoid damages.

SAFETY-RELATED COMPONENT WARNING!!

Components identified by shading and ! mark on the schematic diagrams, exploded views, and in the parts list are critical for safe operation. Replace these components with Sony parts whose part numbers appear as shown in this manual or in supplements published by Sony. Circuit adjustments that are critical for safe operation are identified in this manual.

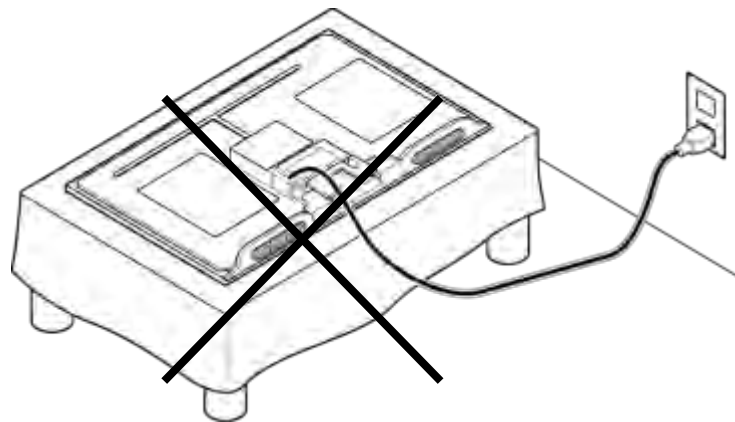

Follow these procedures whenever critical components are replaced or improper operation is suspected.

USE CAUTION WHEN HANDLING THE LCD PANEL

When repairing the LCD panel, be sure you are grounded by using a wrist band.

When repairing the LCD panel on the wall, the LCD panel must be secured using the 4 mounting holes on the rear cover.

- 1) Do not press on the panel or frame edge to avoid the risk of electric shock.
- 2) Do not scratch or press on the panel with any sharp objects.
- 3) Do not leave the module in high temperatures or in areas of high humidity for an extended period of time.
- 4) Do not expose the LCD panel to direct sunlight.
- 5) Avoid contact with water. It may cause a short circuit within the module.
- 6) Always clean the LCD panel with a soft cloth material.
- 7) Use care when handling the wires or connectors of the inverter circuit. Damaging the wires may cause a short.
- 8) Protect the panel from ESD to avoid damaging the electronic circuit (C-MOS).
- 9) It is recommended not to exceed 1 hour of Power-On nor Burn-in period with LCD panel face down condition, in repair activity.
- 10) Disconnect the AC power when replacing the parts.(FFC cable etc.).

SAFETY CHECK-OUT

After correcting the original service problem, perform the following safety checks before releasing the set to the customer:

1. Check the area of your repair for unsoldered or poorly soldered connections. Check the entire board surface for solder splashes and bridges.
2. Check the interboard wiring to ensure that no wires are “pinched” or touching high-wattage resistors.
3. Check that all control knobs, shields, covers, ground straps, and mounting hardware have been replaced. Be absolutely certain that you have replaced all the insulators.
4. Look for unauthorized replacement parts, particularly transistors, that were installed during a previous repair. Point them out to the customer and recommend their replacement.
5. Look for parts which, though functioning, show obvious signs of deterioration. Point them out to the customer and recommend their replacement.
6. Check the line cords for cracks and abrasion. Recommend the replacement of any such line cord to the customer.
7. Check the antenna terminals, metal trim, “metallized” knobs, screws, and all other exposed metal parts for AC leakage. Check leakage as described below.
8. For safety reasons, repairing the Power board and/or Inverter board is prohibited.

Leakage Test

(To protect electric shock when customer touch the terminal.)

Leakage current can be measured by V: Voltmeter or oscilloscope (r.m.s. or peak reading)

Stabilized power supply instrument and isolated voltage transformer:

Use too much current capacity and isolated voltage transformer does not need to use stabilized power supply equipment

Specification of RMS volt meter: Input resistance > 1 Mohm, Input capacitance < 200 pF,

Frequency range: 15 Hz – 1MHz (Refer Figure 1). Isolated type volt -meter (FLUKE 8921A etc *1)

*1 Not use FLUKE 8920A that connected to protective earth by diode

Leakage current of measurement instrument is less than $10\mu\text{Arms}$ when under test equipment AC plug is opened

Set up the following condition and turn on the set.

Applied voltage: Nominal input voltage (Description on Nameplate)

Measure the leakage current between one phase conductor and neutral for terminal A and terminal B.

Read rms value, and then calculate to peak value $\text{PEAK VALUE} = \sqrt{2} \text{RMS VALUE}$

Comply with the following requirement Class II equipment (2-pin plug): for each terminal, the worst value of measurement must not exceed AC 350uA peak). Note: including AC adaptor, AC adaptor/DC operated unit combination

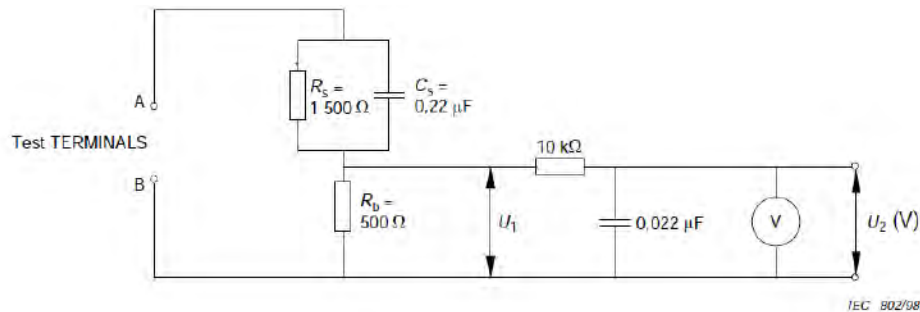

Figure 1 – Measuring network for Leakage Current

How to Find a Good Earth Ground

A cold-water pipe is a guaranteed earth ground; the cover-plate retaining screw on most AC outlet boxes is also at earth ground. If the retaining screw is to be used as your earth ground, verify that it is at ground by measuring the resistance between it and a cold-water pipe with an ohmmeter. The reading should be zero ohms.

If a cold-water pipe is not accessible, connect a 60- to 100-watt trouble- light (not a neon lamp) between the hot side of the receptacle and the retaining screw. Try both slots, if necessary, to locate the hot side on the line; the lamp should light at normal brilliance if the screw is at ground potential (see Figure B).

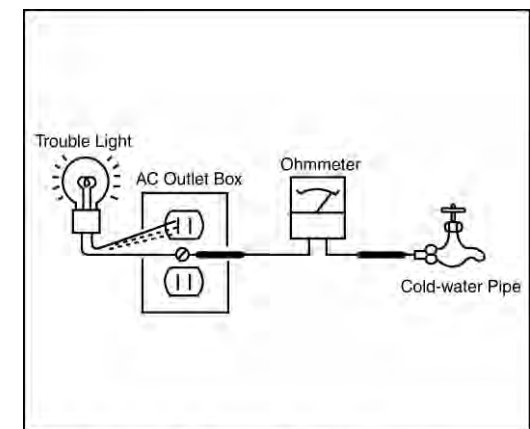

Figure B. Checking for earth ground.

SELF DIAGNOSIS FUNCTION

This model support Self Diagnosis Function.

HOW TO ENTERING Self Diagnosis Display

1) standby mode

- a. Turn on the main power switch to place this set in standby mode.
- b. Press the buttons on the remote commander as follows, and entering service mode.

2) power on mode

- a. Turn on the main power switch to place this set in Power on mode.
- b. Directly go to Self Diagnosis Display in Service Menu.

Self Diagnosis Display

Items	Error Items	Description
002	MAIN_POWER	Detect and observe main voltage
003	AUD_ERR	Detecting/Observing audio AMP error
003	AUD_I2C	Audio AMP communication error
004	PANEL_POWER_ERR	Detect and observe for Panel_12V
005	PANEL_I2C_ERR	Detect Panel I2C Communication access error
006	BACKLIGHT_ERR	Detect and observe backlight error
000	TU_DEMOD	Tuner & Demodulator I2Ccommunication monitoring. Tuner Detect signal monitoring.

SERVICE POSITION

As for this model, the bottom of rear cover is installed between the stand assy and the panel.
Therefore according to the following procedure when performing adjustment and operation check after the part replacement.

<KD-43X SERIES>

1. Remove all screws on the Stand to main unit (4 screws)

2. Remove all screws on the Rear Cover to Bezel & Main Board & Bracket (21 screws)

3. After removing rear cover, lie down the main unit to a surface for following test/repair.

●	4-734-425-01	SCREW M4x16	4
●	7-682-903-19	SCREW M3x6	15
●	7-682-247-09	SCREW M3x6	1
●	4-595-221-01	SCREW T3x8	2
●	4-734-427-01	SCREW T3x6	1
●	4-734-427-01	SCREW T3x6	2

Attention: This photo is based on Sony criteria for appearing standing the main unit after removing back cover and assembling the stand. But considering mechanical design of the models and normal service process, it is not recommended to keep main unit standing by this status for repairing/testing at repair center. Please pay attention for avoiding possible scratch/deformation occurred.

Note: Remove rear cover, then assemble the stand to main unit. This will cause the stand with main unit fit closely, scratch or deformation may occurred easily on the stand or bezel deco.

SERVICE POSITION

As for this model, the bottom of rear cover is installed between the stand assy and the panel.
Therefore according to the following procedure when performing adjustment and operation check after the part replacement.

<KD-49X SERIES>

1. Remove all screws on the Stand to main unit (4 screws)

2. Remove all screws on the Rear Cover to Bezel & Main Board & Bracket (21 screws)

3. After removing rear cover, lie down the main unit to a surface for following test/repair.

SEC 1. DISASSEMBLY AND PARTS LIST

- Items with no part number and no description are not stocked because they are seldom required for routine service.
- The construction parts of an assembled part are indicated with a collation number in the remark column.
- Items marked " * " are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.

The components identified by shading and mark  are critical for safety. Replace only with part number specified.

The components identified by mark  contain confidential information. Strictly follow the instructions whenever the components are repaired and/or replaced.

1-4. How to disassemble rear cover [KD-43X Series]

PROCEDURE TO REMOVAL OF REAR COVER

1. Remove all screws on Rear Cover .
2. Open Rear Cover in order as below.

Hold the panel from the middle of bezel, and lift rear cover in the direction of the arrow.

1-5. How to disassemble rear cover [KD-49X Series]

PROCEDURE TO REMOVAL OF REAR COVER

1. Remove all screws on Rear Cover.
2. Open Rear Cover in order as below.

Hold the panel from the middle of bezel, and lift rear cover in the direction of the arrow.

1-6. How to disassemble rear cover [KD-55X Series]

PROCEDURE TO REMOVAL OF REAR COVER

1. Remove all screws on Rear Cover.
2. Open Rear Cover in order as below.

CONNECTOR

Hold the panel from the middle of bezel, and lift rear cover in the direction of the arrow.

1-7. Assembly the PSU Support pin(KD-43X Series)

1.Assemble the four support pins into the power board. And then check whether the support pins is locked well on the back side of the power board.

Check the support pin is fixed well after power board replacement.

Locked well on the back side of the power board.

Not locked well on the back side of the power board.

Item	Sony PN	Description	Qty
1	4-737-520-01	SUPPORTER, PWB	3

Caution: Please check the support pin after power board replacement.

1-8. Assembly the PSU Support pin(KD-49X Series)

1.Assemble the four support pins into the power board. And then check whether the support pins is locked well on the back side of the power board.

Check the support pin is fixed well after power board replacement.

Locked well on the back side of the power board.

Not locked well on the back side of the power board.

Item	Sony PN	Description	Qty
1	4-737-520-01	SUPPORTER, PWB	3

Caution: Please check the support pin after power board replacement.

1-9. Assembly the PSU Support pin (KD-55X Series)

1. Assembly the four support pins into the power board. And then check whether the support pins is locked well on the back side of the power board.

Check the support pin is fixed well after power board replacement.

Locked well on the back side of the power board.

Not locked well on the back side of the power board.

Item	Sony PN	Description	Qty
1	4-737-520-01	SUPPORTER, PWB	2
